

Abstract of the Disclosure

In a communication system, a mail server and a plurality of electronic devices, which are connected with a network, are provided. A predetermined e-mail address is assigned to the plurality of electronic devices. Each of the plurality of electronic devices includes a first determination system that determines whether an e-mail address of an e-mail message transmitted to the mail server coincides with the predetermined e-mail address, a second determination system that determines whether the e-mail message addressed to the predetermined e-mail address is directed to the electronic device to which the second determination system belongs in accordance with contents of the e-mail message addressed to the predetermined e-mail address, and a processing system that executes a procedure corresponding to the e-mail message when the second determination system determines that the e-mail message is directed to the electronic device to which the second determination system belongs.
